

ACID'EAU R

ACID ADDITIVE FOR CONTROLLING THE PH OF LIVESTOCK DRINKING WATER

- ALLOWS FOR THE PH OF DRINKING WATER TO BE RAPIDLY LOWERED.
 - USED IN CONJUNCTION WITH DESOGERME OPUR.
 - HIGHLY CONCENTRATED, HIGH DENSITY PRODUCT.
 - VERY ECONOMICAL, USED IN VERY LOW DOSES.
- COMPATIBLE WITH FOOD CONTACT, OWING TO A MINERAL ACID-BASED FORMULATION , CONTAINING NO HEAVY METAL TRACES.
 - CONTAINS NO NITRATES OR PHOSPHATES.

1 - INSTRUCTIONS FOR USE:

- Used in conjunction with DESOGERME SANHYDRO or DESOGERME OPUR.

- Add ACID'EAU R to the drinking water to be treated by means of a metered pump.
- Check the pH value of the exiting water using pH indicator paper.
As a guide, we observe the pH reduced by 1 unit per 2L/100m³ of water treated.
- Add more, if necessary, depending on the desired pH.
- The 2L/100m³ dilution can be made up using a 2% metered pump, by sucking up a pre-diluted solution at a ratio of 1/1,000.

2 - APPLICATIONS:

- To re-establish the pH of livestock drinking water in pipes, tanks, drinking troughs, pumps, pools, etc.
- Anti-scale and anti-algae treatment for livestock drinking water and dilution water in feeding machines.

3 - PHYSICOCHEMICAL PROPERTIES:

- Formulation: concentrated sulphuric acid in an aqueous base
- Clear liquid, colourless to pale yellow.
- Odourless.
- Not classified as flammable.
- Density at 20°C: 1.8 ± 0.01 .
- Can be mixed with water.
- pH of the concentrated product <1.
- pH reduced by approximately 1 unit per 2L/100m³ (2ml/m³) of water treated.
- Contains no solvents or nitrates.
- Cleaning, descaling action.
- Effective on zinc and galvanised steel.

4 - SAFETY/ENVIRONMENT:

- ACID'EAU R's components are compatible with food contact.
- ACID'EAU R, which is highly acidic, is **CORROSIVE**: rinse any part of the body that comes into contact with it abundantly with soapy water or water (for the eyes). It is advisable to wear gloves and glasses while handling the product. In the event of an accident , consult a specialist.
 - The product may only be poured down a drain after the pH has been brought back to between 5.5 and 8.5 by neutralising it using a diluted base (soda, bicarbonate of soda, etc.)
 - Not classified as hazardous for the environment.
 - Avoid disposing of the concentrated product in the environment.
